

Navigation Sidebar & Label Revisions

Goal: Restructure the sidebar hierarchy and terminology for enterprise-grade view.

- **Section Header Rename:** Change “Deep Dives” to “In-Depth View”.
- **Tab Relocation & Rename:** Move the “Open Feedback Q10” tab up into the newly named In-Depth View section and rename it “Qualitative Feedback”.
- **Sub-heading Rename:** Rename the “Qualitative” sub-heading to “Raw Data”. Beneath this sub-heading, the single active option should be “Full Survey Data”.
- **Project Status Dropdown Rename:** Change the “Construction Adjacent” category label to “Construction Sites”.

Page 4 Ledger & Qualitative Filtering

Goal: Expand the data logs from a single question to a multi-stream intake network to prevent data blackouts.

- **Multi-Stream Text Aggregation:** Update the raw data table query to display entries from **all** qualitative text columns in the database, specifically:
 - **Online Q3B** (Cost & affordability drivers)
 - **Online Q10** (Estate/neighborhood improvements / "Top Choice 2")
 - **Field Q7** (Voice-captured street-level remedies, paving the way for Phase 2 accessibility branching)
- **UI Input Control:** Add a 'Question Filter' dropdown component directly next to the existing Cohort Filter at the top of the interface. This will let users isolate specific qualitative feedback streams.
- **Component Header Update:** Change *"Recurring themes in open feedback"* to **"Feedback Themes"**
- **Directly beneath** that should be the **updated** User Action Prompt: Change *"click a theme to filter the ledger"* to **"Click theme to filter..."**

Database Schema Patch

Goal: Capture spatial checkpoint data to isolate localized site hoarding disruption from macro neighborhood trends.

- **Table Update:** Append a single tracking column to the **survey_responses** table.
- **Technical Specifications:**
 - **Column Name:** **checkpoint_id** or **location_tag**
 - **Data Type:** **VARCHAR** or **ENUM('Station_A', 'Station_B')**

Demo Visual Placeholders & Permissions

Goal: Inject visual high-value triggers for the investor pitch while protecting software governance.

- **Global Export Button:** Place a dummy 'Export PDF' or 'Download Report' button/icon in the top-right application header.

- Demo Behavior: Keep the component visually active but functionally unclickable, or have it trigger a corner frontend toast notification stating: "Feature locked for Phase 2 Production Launch".
- **Admin Governance:** Complete a hard hide of the **KPI configuration panel** from the standard end-user interface view. This ensures only our internal administrative team retains the capabilities to adjust calculation scripts or threshold values.

Typography & Capitalization Pass

To make sure the platform looks completely unified and premium for the demo, can we do a quick global sweep to clean up text capitalization? Let's use two quick rules across the boards:

- **Title Case for Labels/Headers:** Change any standalone tags or headers to capitalize major words (e.g., change '*Mean cohort*' to '**Mean Cohort**').
- 'first tracked quarter' should be "First Tracked Quarter"

On the page view, change "Raw Survey Data" to "**Full Survey Data**", followed by a new subheader in sentence case:

- **Header (Title Case):** Full Survey Data
- **Sub-header (Sentence Case):** Unified Database containing all raw, numeric, and normalized responses.

Insertion of Long-Range Trend View - Slotted after Overview Page. (Phase Scope Decision)

MVP boundaries regarding time-series tracking.

Note on Scope: We are open to shifting the live implementation of this feature to **Phase 2** if it compromises the immediate Milestone 3 sprint window.

However, if this is a straightforward modification and time permits within Phase 1, insert a visual placeholder for a **Long-Range Time-Series Line Chart** on Page 2. This multi-line component should cleanly illustrate the selected KPI's score tracked across a macro chronological block of **4 to 8 quarters**.
